saurabhxj@gmail.com | +91 62643 13665 | India | github.com/s-johri | linkedin.com/in/saurabh-j-49bb87ba | s-johri.github.io

Software Engineer with an MS in Artificial Intelligence (Boston University) and ~2 years at Code Argo, building education-platform software for the BITS Pilani ecosystem that serves ~180,000 users. Full-stack across Python/Django and Go, spanning student-portal features, certificate-generation microservices, data pipelines, and backend proxies, with an AI-assisted development workflow.

EXPERIENCE

Software Engineer, Code Argo

Vendor engineering team for the BITS Pilani ecosystem

May 2024 – Present

Remote

- Lead ongoing feature development on **elearn**, a Django student portal with **~180,000 total users** (~75,000 active students); owned frontend development end-to-end early in the engagement. Built an async/streaming CSV export for large MGPA and student-evaluation datasets, scaling the export limit to **2.5M rows**, and shipped superuser impersonation (“Log in as”) with full audit logging.
- Maintain and extend **elearn-api-proxy** (Go), a certificate/transcript generation microservice pulling program, degree, and division data from an ERP student-status API, with **52,000+ certificates and transcripts generated** to date for elearn’s student body.
- Built **attendance-sync** (Go), a daily ETL data pipeline parsing course-meeting attendance dumps from a Microsoft API and forwarding organizer attendance and role data into elearn, with **1.3M+ attendance records processed** to date.
- Built **discordbot-go**, a Discord/Google account-linking gate bot serving a community of **~250 members**; implemented a reconciliation/self-healing sweep to correct membership drift and migrated identity and cohort-channel storage from local JSON to PostgreSQL, then to Valkey/Redis.
- Co-built **argo-api-proxy** (Go/Fiber) with API-key request authentication, config-driven routing, and hot config reload; replaced in-memory query buffering with streamed response execution.

PROJECTS

sshush | Go, GitHub Actions, Homebrew

github.com/s-johri/sshush

- Keyboard-driven TUI unifying SSH key management, ssh-agent control, and ~/.ssh/config editing (destructive edits gated behind confirmation with automatic .bak backups) in one Go terminal app. 124 commits, tagged releases, GitHub Actions CI + release pipelines, and a published Homebrew tap (s-johri/homebrew-tap); MIT-licensed and publicly starred.

discordbot-go | Go, PostgreSQL, Valkey/Redis, Discord API

github.com/s-johri/discord-verify-bot

- Public mirror of the Code Argo engagement above (see Experience): reconciliation/self-healing membership sync, a PostgreSQL to Valkey/Redis storage migration, and dynamic per-cohort Discord role assignment driven by a CSV mapping, serving ~250 real community members.

TECHNICAL SKILLS

Languages: Python, Go, JavaScript, SQL, HTML/CSS

Backend & Frameworks: Django, Go Fiber, REST APIs, microservices, HTMX, Tailwind CSS v4, Django templates

Infra & DevOps: Docker & Docker Compose, AWS, Nginx + Vouch Proxy (OAuth2/OIDC SSO), GitHub Actions CI/CD, PostgreSQL, Valkey/Redis caching, BetterStack monitoring, shell scripting

AI Tooling: AI-assisted development (GitHub Copilot agents, Claude Code), local LLM inference (Ollama)

Other: React (JSX)

EDUCATION

MS in Artificial Intelligence

Boston University

2022

B.Tech in Electronics & Communication Engineering

IIT Una

2020
