saurabhxj@gmail.com | +91 62643 13665 | India | github.com/s-johri | linkedin.com/in/s-johri | s-johri.github.io

Backend Software Engineer · Python/Django + Go · MS AI (Boston University)

Django and Go engineer on the BITS Pilani student portal (~180,000 users, ~75,000 active students). Streaming exports, daily ETL pipelines, certificate microservices, and API proxies in production. Two features merged upstream into gopdf, a ~2,900-star Go library.

EXPERIENCE

Software Engineer, Code Argo

Python/Django and Go engineering for the BITS Pilani ecosystem

May 2024 – Present

Remote

- Main engineer for new features on **elearn**, a Django student portal with **~180,000 total users** (~75,000 active students); owned frontend development early in the engagement.
- Built the **Taxila LMS access gate** across two services: a Django gate that checks an external hall-ticket API and mints a signed cross-domain cookie, and the Go nginx auth_request service validating it, with role-based bypass and failure attribution across the two systems.
- Shipped an async/streaming CSV export for MGPA and student-evaluation datasets, scaling the export limit to **2.5M rows**.
- Maintain and extend **elearn-api-proxy** (Go), a certificate/transcript generation microservice pulling program and degree data from an ERP student-status API, with **52,000+ certificates and transcripts generated** to date.
- Built **attendance-sync** (Go), a daily ETL data pipeline parsing course-meeting attendance dumps from a Microsoft API into elearn, with **1.3M+ attendance records processed** to date.
- Built permission-gated user impersonation (“Log in as”) with audit logging, privilege-escalation guards, and Django test coverage, letting support staff reproduce student-reported issues.
- Co-built **argo-api-proxy** (Go/Fiber) with API-key request authentication, config-driven routing, and hot config reload; replaced in-memory query buffering with streamed response execution.

OPEN SOURCE & PROJECTS

signintech/gopdf | Go, PDF internals, external contributions

#347 + #348 (merged)

- Two feature PRs **merged upstream** into **gopdf**, a ~2,900-star Go PDF library (July 2026, both merged as-is): **Justify text alignment** for Cell/MultiCell and **Superscript/Subscript font styles**, with unit and rendered-PDF integration tests; from client PDF generation work.
- Justify distributes leftover width via negative TJ glyph-position adjustments so it coexists with kerning on subset/CID fonts; script styles derive scale and baseline shift from each font’s OS/2 metrics and render via the Ts text rise.

sshush | Go, GitHub Actions, Homebrew

github.com/s-johri/sshush

- Keyboard-driven TUI unifying SSH key management, ssh-agent control, and ~/.ssh/config editing (destructive edits gated with automatic .bak backups) in one Go terminal app. Tagged releases, GitHub Actions CI + release pipelines, and a published Homebrew tap; MIT-licensed.

discordbot-go | Go, PostgreSQL, Valkey/Redis, Discord API

github.com/s-johri/discord-verify-bot

- Discord/Google account-linking gate bot for a ~250-member community (Code Argo client work, public mirror): self-healing membership sync and CSV-driven cohort roles.

TECHNICAL SKILLS

Languages: Python, Go, SQL, JavaScript

Backend: Django, Go Fiber, REST APIs, microservices, ETL pipelines

Frontend: Django templates, HTMLX, Tailwind CSS

Data & Infra: PostgreSQL, Valkey/Redis, Docker, AWS, Nginx + Vouch Proxy (OAuth2/OIDC SSO), GitHub Actions CI/CD, BetterStack monitoring

Testing: pytest, pytest-django, Playwright, Go stdlib testing

AI Tooling: GitHub Copilot agents, Claude Code, local LLM inference (Ollama)

EDUCATION

MS in Artificial Intelligence, Boston University

2022

GPA: 3.8 / 4.0

B.Tech in Electronics & Communication Engineering, IIIT Una

2020
